The Rulio Qi Method

A 30-page practice for the 3-PM wall

by Roel Janssens · Brussels · 2026

Why I wrote this

I burned out twice in my 30s. The first time, I didn't notice for eight months. The second time, I noticed in week one and fixed it in five days — with a five-minute audio practice I'm going to teach you.

This booklet is that practice, plus the science (and the limits) of what's actually happening. No transformation theater. No miracle language. Just what works, what doesn't, and how to know the difference.

What's in here

- The 5-minute solfeggio protocol — the actual steps
- The 9 frequencies and when to use each one
- The 7-day reset for when your week has gone sideways
- The science: what the research actually shows (and what it doesn't)
- The honest caveats — what this is, what it isn't

Chapter 1 — The 5-minute protocol

The whole thing fits in five minutes. Here's the structure.

Step 1. Put on stereo headphones. (The binaural effect requires L/R separation. AirPods count. Bone conduction doesn't.)

Step 2. Pick the frequency that matches your worst hour. (The cheat sheet is in Chapter 2.)

Step 3. Press play. Close your eyes, or soft-focus on something 6 feet away.

Step 4. Breathe normally. You don't need to do anything.

Step 5. Five minutes. Done.

That's it. There is no step 6.

Chapter 2 — The 9 frequencies cheat sheet

Solfeggio frequencies are 9 specific tones with traditional associations. They don't have medical effects, but the meditative response to specific tones is real and reproducible. Use this as a starting point, not a prescription.

174 Hz — Grounding

Use: For when you're scattered or anxious

Best time: Morning or before a meeting

285 Hz — Recovery

Use: Tissue, bones, rebuilding. Felt sense of the body.

Best time: After injury, rest day, or hard workout

396 Hz — Release guilt

Use: For when you're carrying something old.

Best time: Evening, alone, headphones

417 Hz — Change

Use: Transitions — new job, new city, new chapter.

Best time: When something just shifted

528 Hz — Repair

Use: Connection, transformation, the famous one.

Best time: 3 PM wall, broken focus

639 Hz — Connect

Use: Relationships, communication, harmony.

Best time: Before a hard conversation

741 Hz — Awaken

Use: Intuition, problem-solving, expression.

Best time: When stuck, when the answer won't come

852 Hz — Return

Use: Spiritual order, inner strength, perspective.

Best time: When you've lost the plot

963 Hz — Unity

Use: Oneness, sleep, deep rest, dream state.

Best time: Before sleep

Chapter 3 — The 7-day reset

For when your week has already gone sideways. Do this and you reset by Sunday.

Day 1. Pick your worst hour. Note it. Don't try to fix it yet.

Day 2. Run the protocol at that hour. 5 minutes. Note what you noticed.

Day 3. Same hour, same frequency. Note the difference from Day 2.

Day 4. Try a different frequency at the same hour. Compare.

Day 5. Back to the original. What's the same? What's different?

Day 6. Free day. No protocol. Notice what happens without it.

Day 7. Run it again. Notice what you missed on Day 6.

After 7 days, you have data. The protocol is yours, not mine.

Chapter 4 — The science (and the limits)

Solfeggio frequencies have a complicated history. They were popularized in the 1970s by Dr. Joseph Puleo, who claimed biblical numerology pointed to specific healing tones. The Stanford 2018 study that supposedly proved 528 Hz could repair DNA was retracted for serious methodological issues. The research landscape is messy.

What IS supported by evidence:

- Binaural beats (slightly different tones in each ear) can shift brainwave states in measurable ways.
- Low-frequency sound (under 100 Hz) can affect heart rate variability and autonomic tone.
- Meditative states — entered however — reduce cortisol, improve focus, and lower blood pressure.
- The placebo response is real and not lesser for being a placebo.

What is NOT supported:

- Specific frequencies healing specific organs or conditions.
- Solfeggio tones being inherently more 'spiritual' than other frequencies.
- The 528 Hz / DNA repair claim. (Retracted.)

Chapter 5 — What this is, and what it isn't

Solfeggio frequencies are a tool for relaxation and focus. Used the same way music is used — except the tones are chosen for their traditional associations and the binaural structure is designed to support meditative states.

This is not a treatment for any condition. If you have anxiety, depression, PTSD, or any other clinical issue, see a professional. The Rulio Qi Method is a practice, not a cure. It can sit alongside professional care, but it doesn't replace it.

What I recommend instead of a miracle:

1. Try it for 5 days. Notice. If you don't notice, stop.
2. Use the cheapest headphones you have. Don't upgrade.
3. The protocol is the whole thing. The app, the AI coach, the bundle — those are conveniences. The 5 minutes is the product.
4. Don't add it to a stack of other 'optimization' practices. One thing, done daily, beats five things done weekly.
